Relevant Experience

Darktrace

September 2020 - November 2025

Cyber Solutions Architect

- Served as the leading client-facing expert in the Americas (AMS) for escalations of technical troubleshooting of Autonomous Response for /NETWORK (AI-powered IDS/IPS product)
- Led international trainings, authored technical guides on Autonomous Response for AMS, EMEA, and APAC teams

Principal Solutions Engineer, Autonomous Response Specialist

- Increased deployment completion metrics for Autonomous Response in AMS region from 38% to 49% in two quarters by organizing company-wide campaigns and leading a task force of specialists
- Liaised between clients (C-Suite, network admins, security engineers, etc.), Account Executives, Sales Engineers, Customer Success, Dev, and Ops to ensure maximum customer satisfaction with Autonomous Response
- Implemented configuration and testing of integrations (eg. firewall, SIEM, SaaS) with Autonomous Response
- Communicate fluidly in Spanish with LATAM coworkers/clients

Sales Engineer (Cyber Technologist & Sr. Cyber Technology Specialist)

- Served as the primary technical Darktrace resource for 30 clients on the west coast, accounting for \$5.5 million in total contract value (TCV), and closing over \$1 million in new business over 12 months
- Delivered pre-sales technical presentations to security/IT stakeholders in Proof of Concept (POC) sessions to demonstrate use cases and best practices in leveraging AI cybersecurity software
- Provided post-sales client support to advise on security posture, troubleshoot issues, and provide relevant documentation

Skills

- AWS Certified Cloud Practitioner
- *Networking:* Cloud (AWS/Azure/GCP), on-premise switching, distributed networks (MPLS, SD-WAN), DNS, TCP/IP, 802.1Q
- *Programming:* Python, C, HTML
- *Customer service:* Spanish fluency, public & private sector, public-speaking, product demonstration, technical training

Projects

American University ([Xiao Lab](#) 2020)

Computer Science Research Intern

August 2019 – January 2020

- Coded an algorithm in Python to randomly sample video triplets from a space of over 95 million combinations for an experiment comparing human perception of videos to results of an AI (neural network)
- Built a website in JavaScript and HTML/CSS and set up a virtual private server (VPS), allowing us to administer the experiment at a significantly faster speed and increase our data from 1500 video triplets to the desired 5000

Mentor (“Best STEM Education Hack”, QWER Hacks 2020)

- Facilitates tech mentorship matches based on shared interests, availability, and identity categories

Education

University of Chicago, Chicago, IL

September 2016 – August 2020

- B.A. in Statistics
 - *Honors:* Dean’s List (2017, 2018)
- GPA: 3.23/4.0
